Civil

PROJECTS

Chat Application

React | React context | Nextjs | Tailwind
CSS | Firebase

- Developed a chat application using React, Next.js, and Firebase.
- Features include user authentication, registration, and friend management.
- Enables users to send text, photos, and emojis in conversations.
- Provides the ability to block users and edit sent messages for enhanced usability.
- [App Link](#)

Movix App

React | Redux | SASS | Vite

- Created a comprehensive movie, TV series, and show database with search and rating functionalities.
- Utilized React, Redux, and SCSS for seamless user interactions and state management.
- Users can search for content, view trending items, and access detailed information like ratings, trailers, and cast members.
- The project offers a user-friendly interface to explore and discover various movies and TV shows efficiently.
- [App Link](#)

Youtube Clone

React | React context | Tailwind CSS |
Rapid API

- Created a YouTube clone using React, TailwindCSS, and the YouTube API.
- Offers real YouTube videos across different categories for users to explore.
- Provides a search functionality to find specific videos of interest.
- Users can play videos and receive suggestions for related content, enhancing their viewing experience.
- [App Link](#)

TYPO - typing test game

HTML | CSS | Javascript

- Created a typing test game using HTML, CSS, and JavaScript.
- Users can play a 30-second typing test with accurate detection of incorrect typings and spaces.
- At the end of the test, the game displays the Words Per Minute (WPM) score to evaluate the user's typing speed.
- Offers an engaging and interactive way for users to practice and improve their typing skills.
